Characteristics of The Haven

For people who have been to the Haven meeting it's quite clear what makes it special (and valuable). You can 'feel' it. It's palpable.

Here are some thoughts - others may want to make further suggestions. It might always be 'work in progress'.

- There is 'a buzz'
- It allows people to 'be involved', to 'engage',
- There is the freedom to explore – the permission to take risks – it allows (even encourages) new ideas, some surprises.
- People laugh a lot – sometimes at themselves. They take it seriously but they don't take themselves too seriously. They can be self-reflective yet self-critical.
- People respect each other. There is 'empowerment'. They 'trust' one another.
- It's a time for nurturing, growth, development
- It's very 'two-way' – not 'top-down'. People face big issues, and find the best solutions for themselves (not necessarily what might be considered to be 'the right' solutions that others would think are required).

The Wessex approach is not about 'pot-filling'. It is concerned with 'lighting fires' – fires which for many people who come to the Haven are already beginning to burn brightly, or for some might be starting to fade. It involves interacting and sharing, and in this way it creates an environment – an atmosphere – in which new thoughts, new ways of working, new initiatives can emerge and develop. It 'draws out' rather than 'stuffs in'. In that sense, it is truly educational.

Navigating the next industrial revolution

Revolution	Year	Information
	1	1784 Steam, water, mechanical production equipment
	2	1870 Division of labour, electricity, mass production
	3	1969 Electronics, IT, automated production
	4	? Cyber-physical systems

Watson is a cognitive technology that can think like a human.

Understand

With Watson, you can analyze and interpret all of your data, including unstructured text, images, audio and video.

Reason

With Watson, you can provide personalized recommendations by understanding a user's personality, tone, and emotion.

Learn

With Watson, you can utilize machine learning to grow the subject matter expertise in your apps and systems.

Interact

With Watson, you can create chat bots that can engage in dialog.

A \$10 MILLION COMPETITION TO BRING HEALTHCARE TO THE PALM OF YOUR HAND

Imagine a portable, wireless device in the palm of your hand that monitors and diagnoses your health conditions. That's the technology envisioned by this competition, and it will allow unprecedented access to personal health metrics. The end result: Radical innovation in healthcare that will give individuals far greater choices in when, where, and how they receive care.

The winning team will develop a Tricorder device that will accurately diagnose 13 health conditions (12 diseases and the absence of conditions) and capture five real-time health vital signs, independent of a health care worker or facility, and in a way that provides a compelling consumer experience.

Book Review

- Let's be the best Deanery to create the doctor that AA Gill found comforting
- Warn trainees of caring only for the iPatient
- Rebuild the physical spaces and connections between the team of caregivers and patients
- More time with each other and our patients (coffee, doughnuts, dinners)
- Show that we grope the patient's spirit and give of your mind
- Prepare our future workforce for the grey space of uncertainty
